

# Hyphaene thebaica (L.) Mart.

Identifiants : 16580/hypthe

Association du Potager de mes/nos Rêves (<https://lepotager-demesreves.fr>)

Fiche réalisée par Patrick Le Ménahèze

Dernière modification le 10/05/2024

• **Classification phylogénétique :**

- Clade : Angiospermes ;
- Clade : Monocotylédones ;
- Clade : Commelinidées ;
- Ordre : Arecales ;
- Famille : Arecaceae ;

• **Classification/taxinomie traditionnelle :**

- Règne : Plantae ;
- Division : Magnoliophyta ;
- Classe : Liliopsida ;
- Ordre : Arecales ;
- Famille : Arecaceae ;
- Genre : Hyphaene ;

- **Synonymes :** *Chamaeriphes crinita* (Gaertn.) Kuntze, *Chamaeriphes thebaica* (L.) Kuntze, *Corypha thebaica* L, *Cucifera thebaica* (L.) Delile, *Douma thebaica* (L.) Poir, *Hyphaene baikieana* Furtado, *Hyphaene crinita* Gaertn, *Hyphaene dahomeensis* Becc, *Hyphaene dankaliensis* Becc, *Hyphaene guineensis* Schum. & Thonn, *Hyphaene nodularia* Becc, *Hyphaene occidentalis* Becc, *Hyphaene santoana* Furtado, *Hyphaene sinaïtica* Furtado, *Hyphaene togoensis* Dammer ex Becc, *Hyphaene tulejana* Furtado, *Palma thebaica* (L.) Jacq ;

- **Nom(s) anglais, local(aux) et/ou international(aux) :** *Gingerbread palm, Doum palm, , African Doum palm, Babazla, Bar, Bri-goruba, Dom, Doum, Dum palm, Gellohi, Goriba, Goruba, Karjim, Kunchula, Manie, Mukpiatikakadata, Na, Poro, Sete ;*

• **Note comestibilité : \*\***

- **Rapport de consommation et comestibilité/consommabilité inférée (partie(s) utilisable(s) et usage(s) alimentaire(s) correspondant(s)) :**

Noix sèches/séchées<sup>{{(0+\*)}}</sup>.

La couche intermédiaire spongieuse du fruit est utilisée pour la farine. Le noyau est mangé. Les graines sont germées dans le sol puis mangées. Les jeunes fruits sont bouillis et mangés. Le chou de palme est comestible. La pousse de la graine en développement avant l'émergence des feuilles peut être mangée

Partie testée : noix séchées<sup>{{(0+\*)}}</sup> (traduction automatique)

Original : Nuts dried<sup>{{(0+\*)}}</sup>

dont infos de "FOOD PLANTS INTERNATIONAL" :

◦ **Distribution :**

*Une plante tropicale. Il poussera dans les régions tempérées chaudes, subtropicales et tropicales. Il ne tolérera pas le gel. Il pousse dans les régions côtières. Il peut pousser dans des endroits arides. On le trouve dans les régions les plus sèches de l'Afrique de l'Ouest. Il pousse au Sahel. Il se trouve souvent sur le sol laissé par les crues des rivières. Il forme des peuplements denses dans des vallées chaudes et sèches. Ils poussent là où la température est de 20 °C à 35 °C ou 40 °C. Ils poussent jusqu'à 600 m d'altitude. Ils sont courants dans les zones avec une pluviométrie comprise entre 150 et 600 mm par an. Ils peuvent pousser sur des sols salins. Il peut pousser dans des endroits arides. Ils préfèrent un pH du sol de 6,5 à 7,6. Ils sont pollinisés par le vent. Il convient aux zones de rusticité 10-12. Dans Townsville palmetum<sup>{{(0+X)}}</sup> (traduction automatique).*

*Original : A tropical plant. It will grow in warm temperate, subtropical and tropical regions. It will not tolerate frost. It grows in coastal regions. It can grow in arid places. It is found in the drier parts of West Africa. It grows in the Sahel. It is often on soil left by floods from rivers. It forms dense stands in hot dry valleys. They grow where the temperature is 20°C to 35°C or 40°C. They grow up to 600 m altitude. They are common in areas with a rainfall between 150 and 600 mm per year. They can grow on saline soils. It can grow in arid places. They prefer a soil pH of 6.5-7.6. They are pollinated by wind. It suits hardiness zones 10-12. In Townsville palmetum<sup>{{(0+X)}}</sup>.*
